ownership**
dream a reality

The page features several large, 3D-style blue geometric shapes that create a sense of depth and movement. These shapes are composed of various rectangular and trapezoidal forms, some overlapping and others extending from the edges of the page. The colors range from a deep navy blue to a lighter, almost white blue, creating a layered effect. The overall design is clean and modern, with a focus on geometric patterns.

PILLAR 3 DISCLOSURE

1.0 OVERVIEW

The Pillar 3 Disclosure is part of Bank Negara Malaysia's (BNM's) requirements under its Risk-Weighted Capital Adequacy Framework (RWCAF) which consists of 3 Pillars:

- Pillar 1 Sets out the minimum capital requirements for credit, market and operational risks.
- Pillar 2 Aims to ensure that banking institutions maintain adequate capital levels consistent with their risk profile and business plan at all times.
- Pillar 3 Aims to promote transparency through enhanced disclosure on risk management practices and capital adequacy.

From the regulatory standpoint, the Group is not required to comply with the Bank Negara Malaysia (BNM) Basel II Pillar 3 requirements but has chosen to adopt the disclosure requirement as a matter of best practices. The Group's Pillar 3 disclosure is governed by the approved Disclosure Policy on Risk-Weighted Capital Adequacy Framework (Basel II Pillar 3) which documents the content, materiality, frequency of disclosures and internal controls over the disclosure process.

In determining the capital requirement for credit risk, the Group has adopted the Advanced Internal Rating Based (AIRB) Approach for the Purchase Without Recourse (PWOR) portfolio and Standardised Approach for Purchase With Recourse (PWR) portfolio and investments.

For market risk, the Group adopts the Standardised Approach whilst risk weighted capital requirement for operational risk is based on the Basic Indicator Approach which is the average of a percentage fixed by BNM of positive annual gross income over the previous three years.

Under the BNM's RWCAF Basel II Pillar 3, the information disclosed herein is not required to be audited by external auditors. However, the disclosures provided herein have been reviewed and verified by internal auditors and attested by the President/Chief Executive Officer. The Pillar 3 disclosure will be published annually together with the annual report which is available in the Company's website, www.cagamas.com.my.

2.0 SCOPE OF APPLICATION

The basis for consolidation is described in Note 2.2 to the financial statements. There are no significant restrictions or impediments to the transfer of funds or regulatory capital within the Group. There are no capital deficiencies in any of the subsidiary companies of the Group during the year.

For the purpose of this Pillar 3 disclosure, the scope shall be restricted to subsidiary which is material in relation to the Group's assets i.e. Cagamas Berhad and its subsidiaries only (referred to herein as the Company). The disclosures published are for the year ended 31 December 2014 which is based on consolidated Cagamas Berhad whilst corresponding disclosure in the preceding reporting period as at 31 December 2013 is Cagamas Berhad only. Information on subsidiaries of the Group is available in the notes to the financial statements.

3.0 CAPITAL MANAGEMENT

The Company's capital management is guided by its Capital Management Framework which sets out the minimum policies and procedures required to be put in place to ensure adequate capital is maintained to support the development of its businesses.

The framework aims to ensure that the Company reviews its capital requirements over a minimum of a 3-year period, consistent with the Company's risk profile and business plan and also to maintain an adequate capital level at all times. This involves the following key initiatives:

- Focus on measuring return on capital employed in evaluating business proposals that requires incorporating the Company's unique developmental role in the debt capital market and as a liquidity provider;
- Continuous monitoring of the robustness of its capital position and an efficient use of capital through the 3-year capital plan;
- Early planning to meet Basel III requirements, including the implementation of the ICAAP as well as ensuring that capital requirements under stressed scenarios are taken into account in capital planning.

PILLAR 3 DISCLOSURE

(Continued)

3.0 CAPITAL MANAGEMENT (CONTINUED)

The capital management strategy is dynamic and forward-looking, incorporates the capital needs of existing and new businesses and takes into account the business environment that impacts the needs and value of the Company.

The strategy involves the proactive management of the Company's capital structure to be effective whilst maintaining a strong and robust capital position aligned to the risk profile and supports business growth. This involves ongoing review and monitoring of the level and quality of the Company's capital by the Board of Directors, and is assessed based on the following key objectives:

- Maintaining a high level of financial strength, correlated to the overall risk profile and risk appetite;
- Preserving financial flexibility for funding internal growth;
- Be able to withstand capital demands under market shocks and stress conditions;
- Maintaining the Company's strong external credit ratings;
- Satisfying the expectations of the various stakeholders, counterparties, debt obligors, rating agencies and shareholders.

The revised guidelines on the capital management framework which was issued by BNM on 28 November 2012 sets out the general requirements concerning regulatory capital adequacy, components of eligible regulatory capital and requirements for computing risk weighted assets (RWA). RWA for the Company is computed in accordance with the Basel II Capital Adequacy Framework.

3.1 Capital Adequacy Ratios

The following table details the capital adequacy ratios for Cagamas Berhad:

	2014	2013
<i>Before deducting proposed dividends</i>		
Core capital ratio	23.6%	23.7%
Risk-weighted capital ratio	24.3%	24.3%
<i>After deducting proposed dividends</i>		
Core capital ratio	23.5%	23.5%
Risk-weighted capital ratio	24.2%	24.1%

3.2 Capital Structure

The following table details the capital structure for Cagamas Berhad:

	2014	2013
	RM'000	RM'000
Tier I Capital		
Paid-up share capital	150,000	150,000
Retained profits	2,624,847	2,406,998
Less: Deferred tax assets	(6,236)	(8,929)
	2,768,611	2,548,069
Tier II Capital		
Allowance for impairment loss	72,471	63,855
Capital Base	2,841,082	2,611,924

3.3 Minimum Regulatory Capital Requirement

The following table presents the minimum capital requirements to support the Company's RWA:

	2014 RM'000	2013 RM'000
Exposure Class		
<i>Risk weighted assets</i>		
i) Credit Risk	10,970,406	10,044,004
ii) Market Risk	-	-
iii) Operational Risk	737,093	705,105
Total	11,707,499	10,749,109
<i>Minimum capital requirement at 8%</i>		
i) Credit Risk	877,633	803,520
ii) Market Risk	-	-
iii) Operational Risk	58,967	56,408
Total	936,600	859,928

4.0 RISK MANAGEMENT

The Cagamas Group takes a holistic and enterprise-wide view in managing risk across the subsidiaries with regular evaluation of risks.

4.1 Enterprise Risk Management (ERM) Framework

ERM forms part of the Group's culture and is embedded into business, operations and decision-making processes and practices. The Board approved ERM Framework details the responsibility and accountability of the Board of Directors ("the Board" or "BOD"), Board Risk Committee (BRC), President/Chief Executive Officer (CEO), Chief Risk Officer (CRO), Management Executive Committee (MEC), Asset Liability Committee (ALCO), Risk Management Department (RMD), Internal Audit Department (IAD) and Cagamas employees.

The ERM Framework is geared towards achieving Group's objectives, set forth in four categories:

- Strategic – high-level goals, aligned with and supporting its mission
- Operations – effective and efficient use of its resources
- Financial – profitability and sustainability of performance
- Reporting & Compliance – reliability of reporting and compliance with applicable laws and regulations

In line with the ERM, three lines of defence in managing risks is adopted within the Group. Business units being the first line of defence have the primary responsibility of identifying, mitigating and managing risks within their lines of business. They also ensure that their day-to-day activities are carried out within established risk policies, procedures and limits.

An independent RMD plays the role of second line of defence by providing specialised resources to proactively manage risks. This includes the assessment of risk exposures and the coordination of risk management on an enterprise-wide basis. RMD is also responsible for ensuring that risk policies are implemented accordingly.

The IAD being the third line of defence is responsible for independently reviewing the adequacy and effectiveness of risk management processes, system of internal controls and compliance with internal risk policies.

PILLAR 3 DISCLOSURE

(Continued)

4.0 RISK MANAGEMENT (CONTINUED)

4.2 Risk Governance Structure

The Board sets the overall strategic direction for the Group. It provides oversight to ensure that Management has appropriate risk management system and practices to manage risks associated with the Group's operations and activities. The Board sets the risk appetite and tolerance levels that are consistent with the Group's overall business objectives and desired risk profile. The Board also reviews and approves all significant risk management policies and risk exposures.

The BRC assists the BOD by ensuring that there is effective oversight and development of strategies, policies and infrastructure to manage the Group's risks. The BRC is supported by management committees which address key risks identified.

The MEC and ALCO which comprises senior management of the Group are chaired by the CEO and undertake the oversight function for capital allocation and overall risk limits, aligning them to the risk appetite set by the Board. Management is also responsible for the implementation of policies laid down by the Board and ensuring there are adequate and effective operational procedures, internal controls and systems to support these policies.

The RMD is responsible for identifying, measuring, analysing, controlling, monitoring and reporting of risk exposures independently and coordinating the management of risks on an enterprise-wide basis. It is independent of other departments involved in risk taking activities and reports directly to the BRC.

4.3 Internal Capital Adequacy Assessment Process (ICAAP)

ICAAP primarily involves a comprehensive assessment of all material risks that the Company is exposed to, assessing the adequacy of the Company's capital in relation to its risks and set capital targets that commensurate with its risk profile and operating environment, taking into consideration the Company's business strategy and risk appetite. The following are the main components in the Company's ICAAP:

Risk Appetite

Risk Appetite is the acceptable risk tolerance for each material risk category and other related parameters in achieving the Company's business objectives. It does not seek to prevent risk taking. Instead, it ensures that the risks undertaken by the Company are aligned to its chosen business strategies.

Material Risk Assessment & Quantification

Analyse all risks that occur in the Company's business activities and recognise the risks that the Company is in or can be exposed to in the future. These include quantifiable and non-quantifiable risks. Risks are aggregated in order to determine the Company's overall risk under the ICAAP, including impact assessment of stress on internal RWCR target.

Stress testing

A rigorous and forward-looking stress testing is an integral part of ICAAP, enabling the Company to assess the impact to its capital adequacy arising from adverse events or changes in market conditions. Further stress testing would enable the Company to assess the vulnerability of its balance sheet and resilience of financial plans to extreme but plausible stress events.

To ensure effectiveness of stress test results, a range of scenarios are considered which includes at least an adverse economic scenario that is severe but plausible, such as severe economic downturn and/or a system-wide shock to liquidity. The stress would be company-wide covering all relevant risk areas and material entities within the Company. Results of the stress test are deliberated by the MEC and reported to the BRC and BOD.

PILLAR 3 DISCLOSURE

(Continued)

4.0 RISK MANAGEMENT (CONTINUED)

4.3 Internal Capital Adequacy Assessment Process (ICAAP) (Continued)

Capital management

Measurement of the Company's available capital and capital instruments is detailed out in the Capital Management Framework. The components considered in available capital are reviewed or enhanced when required to ensure relevance.

Independent review

An independent review of ICAAP is performed to review the processes or systems for assessing the various risks that the Company is exposed to and for relating the risks to capital levels. The scope includes review of the appropriateness of the internal capital adequacy assessment process, the identification of material risks, the reasonableness of stress testing scenarios, the integrity, verifiability and completeness of data inputs and the assumptions used.

5.0 CREDIT RISK

Credit risk is defined as the potential for financial loss resulting from the failure of a borrower or counterparty to fulfill its financial or contractual obligations. Credit risk within the Company arises from Purchase with Recourse (PWR) and Purchase without Recourse (PWOR) business, investments and treasury hedging activities. The Company seeks to take credit risks that meet the underwriting standards while ensuring risks taken commensurate with the margin charged.

Credit Risk Management Oversight and Organisation

The Management Executive Committee (MEC) is the senior management committee responsible for the Company's overall credit risk exposures, taking a proactive view of risks and to position the credit portfolio. MEC which is chaired by the CEO also reviews the Company's credit risk management framework, the credit profile of material portfolios and aligns credit risk management with business strategy.

Business Units undertake thorough credit assessment prior to submission to the Credit Risk Section of the RMD. The Credit Risk Section will independently assess the credit risk of the counterparty taking into consideration the financial strength and business profile prior to recommendation to the MEC. Credit Risk Section is also responsible for formulating and developing credit risk policies and procedures for identifying, measuring, monitoring and reporting credit risk of the Company. Credit limits are approved by MEC within the risk appetite set by the BOD.

Regular risk reporting which include quality of portfolio, changes in counterparties' rating and concentration risk exposures is made to the BRC and BOD for an oversight function.

Credit Risk Management Approach

Credit risk management includes the establishment of credit risk policies, procedure manual documenting the Company's credit risk processes and controls, approval authority, credit risk rating and review credit risk processes. These standards cover credit origination, measurement and documentation as well as problem recognition, classification and remedial actions.

The Company manages its credit risk via a thorough assessment of the counterparties, stipulates prudent eligibility criteria and conducts due diligence on loans and financings to be purchased. The Company has in place an internal rating system which sets out the maximum credit limit permissible for each category of rating.

Credit limits are reviewed periodically and are determined based on the combination of external ratings, internal credit assessment and business requirement. Financing activities are also guided by internal credit policies, procedure manuals and Risk Appetite Framework that are approved by the BOD.

PILLAR 3 DISCLOSURE

(Continued)

5.0 CREDIT RISK (CONTINUED)

Key areas of credit exposures:

a) Purchase With Recourse (PWR)

Under the PWR scheme, the Company takes on counterparty risk i.e. credit risk of the selling institutions given the latter's undertaking to repurchase or replace ineligible loans. Reviews on counterparties are conducted at least once a year with updated information. The Company has strict limits on counterparty exposures based on rating and internal credit assessment. In addition, concentration risk under PWR are managed and monitored via concentration limits established based on the type of counterparty and the type of assets.

b) Purchase Without Recourse (PWOR)

As for PWOR scheme, the Company absorbs all the credit risk of the loans and financing acquired wherein purchases are restricted to the approved sellers and assets. Purchase of these loans is managed via adherence to stringent eligible criteria and due diligence on the portfolio prior to the purchase. To further mitigate credit risks, PWOR purchases may include loans with automated salary deduction feature. These portfolios are monitored via concentration limits based on property types and location.

c) Investment and Derivatives Activities

The management of credit risk arising from the Company's investment of its surplus funds is primarily via the setting of counterparty credit limits. These credit limits are established following an assessment of the counterparty creditworthiness and is subject to the credit policy on investment which stipulates the minimum investment grade for debt securities and the maximum tenure. The policy is subject to regular review. Credit exposures are also controlled through independent monitoring and reporting of excesses and breaches against approved limits and risk mitigation thresholds.

The Company has limited exposure to Interest Rate Swap (IRS), Islamic Profit Rate Swap (IPRS) and Cross Currency Swap (CCS) which is primarily used for hedging purposes only.

5.1 Credit Risk Mitigation

Generally, credit limits are not granted solely on the basis of the collateral provided as all credit limits are assigned on the basis of the counterparty's credit standing, source of repayment and debt servicing ability.

Under the PWR scheme, the Company accepts guarantee from the parent company of the corporate and institutional counterparties to mitigate credit risk subject to internal guidelines and policy. For the credit exposure which is secured by a guarantee from an eligible guarantor, the portion of the exposure is weighted according to the risk weight appropriate to the guarantor. In accordance to the BNM's RWCAF guidelines, this guarantee shall not be considered again for credit risk mitigation purposes as the rating has already taken into account the guarantee pledged by the parent of the counterparty.

PILLAR 3 DISCLOSURE

(Continued)

5.0 CREDIT RISK (CONTINUED)

5.4 Credit Rating

5.4.1 Assignment of risk weights under the Standardised Approach

Under the Standardised Approach, the Company uses the credit rating assigned by the credit rating agencies in its calculation of credit risk-weighted assets for PWR, investment, IRS and CCS assets in accordance with BNM RWCAF. Rating agencies or External Credit Assessment Institutions ("ECAI") recognised by BNM are as follows:

- (i) Standard & Poor's Rating Services (S&P);
- (ii) Moody's Investors Service (Moody's);
- (iii) Fitch Ratings (Fitch);
- (iv) Rating Agency Malaysia Berhad (RAM);
- (v) Malaysian Rating Corporation Berhad (MARC); and
- (vi) Rating & Investment Information, Inc (R&I).

In accordance with BNM RWCAF, where the exposure is rated by more than one external rating agency, risk weight shall be determined based on the second highest rating. The counterparty shall be deemed as unrated when an exposure is not rated by the rating agency whilst exposure which is secured by an explicit guarantee issued by an eligible or rated guarantor, rating similar to that of the guarantor is assigned. For the purpose of Cagamas internal rating, the lowest rating is adopted in cases where the counterparty is rated by more than one external rating agency.

The following table presents the credit exposures of the Company after the effect of credit risk mitigation by risk weights:

5.0 CREDIT RISK (CONTINUED)

5.4 Credit Rating (continued)

5.4.2 Assignment of risk weights under the Advanced Internal Rating Based (AIRB) Approach

The Company adopts the AIRB approach for its PWOR exposure which primarily consists of mortgage loans and hire purchase loans using 3 key parameters i.e. PD, LGD and Exposure at Default (EAD) to quantify credit risk.

The risk estimates are developed based on internal historical data wherein study on the historical behaviour of the portfolio forms the basis for the computation of PD and LGD. EAD is the exposure when default occurs.

Disclosure on exposure by PD range:-

2014	EAD RM'000	LGD %	Exposure Weighted Average RW %	RWA RM'000
Mortgage assets				
PD range: up to 0.5%	-	-	-	-
>0.5% to 3%	16,929,050	32.08%	27.09%	4,586,722

5.0 CREDIT RISK (CONTINUED)

5.5 Past Due and Impaired Loans

The Company assesses the loan impairment rate by determining the PD and LGD for the mortgage loans purchased from the Government of Malaysia ("GOM") based on the data provided by GOM. Impairment allowance required is determined by the PD and LGD as calculated by the Company, and these are calculated based on the loan impairment methodology.

PD is calculated as the number of defaulted loans over the total number of loans from the beginning of the 12 months beginning from the date of purchase to the cut-off date.

LGD is calculated using recoveries as a percentage of the defaulted outstanding balance using the recovery data of loans which have defaulted from 2004 to 2013 and incorporates both cash recoveries and recoveries from the disposal of collateral. An adjustment is made to reflect the view that the Company's recovery data is not yet seasoned.

Impairment allowance is calculated on a collective, not individual basis as this reflects homogeneous nature of the assets, which allows statistical techniques to be used, rather than individual assessments.

(a) The following table is a summary of the impairment allowance by economic purposes:

	Neither past due nor impaired RM'000	Past due but not individually impaired RM'000	Total RM'000	Impairment allowance RM'000	Total carrying value RM'000
2014

6.0 MARKET & LIQUIDITY RISK

Market risk is the potential loss arising from adverse movement of market prices and rates. Market risk exposure is limited to interest rate and foreign exchange as the Company is not engaged in any equity or commodity trading activities. The Company is not exposed to interest rate and foreign exchange risk arising from trading activities as it is prohibited.

Liquidity risk arises when the Company do not have sufficient funds to meet its financial obligation when they fall due.

Market and Liquidity Risk Management Oversight and Organisation

The ALCO is the senior management committee responsible for the Company's management of market and liquidity risk activities including the setting of risk limits. The ALCO which is chaired by the CEO reviews the Company's market and liquidity risk policies, funding strategy, align market and liquidity risk management with business strategies and review performance of investment portfolio, hedged positions and risk limits/compliance.

RMD supports ALCO at the working level and is an independent risk control unit responsible for developing the market and liquidity risk policy and ensuring adequate risk control oversight.

Market and Liquidity Risk Management Approach

The Company manages market and liquidity risks by imposing threshold limits which are approved by management within the parameters approved by the Board based on a risk-return relationship.

Further, the Company also adheres to a strict match-funding policy where all asset purchases are funded by bonds of closely matched size as well as duration and is self-sufficient in terms of cashflow. Forward looking liquidity mechanism is in place to promote efficient and effective cashflow management while avoiding excessive concentration of funding. The Company plans its cash flow and monitors closely every business transaction to ensure that available funds are sufficient to meet business requirements at all times. Reserve liquidity which comprises marketable debt securities are also set aside to meet any unexpected shortfall in cash flow or adverse economic conditions in the financial market.

Derivatives instruments such as interest rate swaps and cross currency swaps are used to manage and hedge market risk exposures against fluctuations in interest rates and foreign exchange. Liquidity management processes involve regular monitoring against liquidity risk limits, and establishing contingency funding plans. These processes are subject to regular review. The Company also monitors liquidity based on Basel III liquidity coverage ratio and net stable funding ratio.

6.0 MARKET & LIQUIDITY RISK (CONTINUED)

6.1 Management of Interest Rate Risk in the Banking Book

The interest rate risk in the banking book is monitored on a monthly basis and exposure is minimal given the match funding approach adopted by the Company for its assets and liabilities. The impact on net interest income is simulated and the following table summarises the impact arising from a 100 basis points parallel shift.

Type of Currency	Impact on Position as at 31 December 2014	
	(-100 basis points) Parallel Shift	(+100 basis points) Parallel Shift
	Increase/(Decline) in Net Interest Income RM'000	Increase/(Decline) in Net Interest Income RM'000
MYR	(5,304)	5,311

Type of Currency	Impact on Position as at 31 December 2013	
	(-100 basis points) Parallel Shift	(+100 basis points) Parallel Shift
	Increase/(Decline) in Net Interest Income RM'000	Increase/(Decline) in Net Interest Income RM'000
MYR	(14,301)	14,395

6.2 Management of Non-Traded Foreign Exchange Risk

The Company is exposed to foreign exchange risk from Treasury funding activities whose functional currencies are not in *Ringgit Malaysia*. Foreign currency risk is managed/hedged by entering into cross currency swap with selected counterparties at the outset and concurrent with bond issuance and asset purchase to ensure that there is no timing mismatches between cash flows from the underlying assets, obligations on the foreign currency bonds as well as the hedge instrument.

PILLAR 3 DISCLOSURE

(Continued)

7.0 OPERATIONAL RISK

Operational risk is the potential loss resulting from inadequate or failed internal processes, people and systems or from external events.

It includes reputational risk associated with the Company's business practices or market conduct. It also includes the risk of failing to comply with applicable laws and regulations.

Operational Risk Management Oversight and Organisation

It is the MEC that governs operational risk within the Company. The Committee meets at least on a quarterly basis and discusses operational risk related issues.

The RMD established the Company's Operational Risk Management (ORM) Framework which clearly defines the Company's approach to operational risk management that includes the Company Risk & Control Self-Assessment/Operational Risk Policy and Standards ("The Policy"). The operational risk section of RMD provides independent oversight of operational risk monitoring and control. Legal Risk is managed by the Legal and Compliance Department (LCD) and where necessary, in consultation with external legal counsel.

Operational Risk Management Approach

The Operational Risk Management policy codifies the core governing principles for operational risk management and provides a consistent, value added framework for assessing, communicating operational risk and the overall effectiveness of the internal control environment

Business/Support Units constitute an integral part of the operational risk management framework and are primarily responsible for the day-to-day management of operational risk. These units are responsible for establishing and maintaining their respective operational manuals and ensuring that activities undertaken comply with the Group's operational risk management framework. Each business/support unit undertakes self-assessment of the risk and control environment to identify, assess and manage its operational risks. Operational risk losses and incidents are reported to senior management and BRC through RMD who provides independent assessment.

The Management places a very high value on maintaining an effective control environment to mitigate operational risk. Therefore, a number of tools have been put in place to mitigate this risk. These tools range from:

- Risk & Control Self-Assessment ("RCSA") which is a process of continual assessment of inherent operational risks and controls to identify control gaps and to develop action plans to close the gaps. It is a risk profiling tool which facilitates effective operational risk management for the Company. The RCSA is signed-off by the respective department senior management/head;
- Key risk indicators as early warning signals of increasing risk and/or control failures by flagging up given frequencies of events as a mechanism for continuous risk assessment/monitoring;
- Incident management which is a structured process and system to identify and focus attention on operational 'hotspots' and facilitates the minimisation of risk impact; and
- Operational loss reporting.

In order to ensure uninterrupted services and to safeguard human life and Cagamas' assets during disaster, Cagamas has put in place a well defined Business Continuity Management (BCM) for its various critical functions. BCM comprises of Business Continuity Plan (BCP) and Disaster Recovery (DR), in the event of business disruption/disaster and consequent BCP invocation. The resilience of these plans under different scenarios are being tested on an ongoing basis through regular DR exercises.

The Company uses Basic Indicator approach for calculating Operational Risk Capital.

PILLAR 3 DISCLOSURE

(Continued)

8.0 SHARIAH GOVERNANCE DISCLOSURE

The Company consults and obtains endorsements/clearance from an independent Shariah Advisor for all its Islamic products and transactions to ensure compliance with Shariah requirements. In addition, the Company will also obtain the approval of the Shariah Advisory Councils of Bank Negara Malaysia and/or Securities Commission for its Islamic products, if required.

Periodic internal audits are performed to verify that the Company's Islamic operations are in compliance with the decisions endorsed by the Shariah Advisor. Any incidences of Shariah non-compliance are reported to both the Shariah Advisor and the Group Board Audit Committee.

During the financial period under review, there is no non-Shariah compliant event being reported.
